

Abstract

Ins 287
Method for optimization of the utilization of
connecting sections in systems in which information
is transmitted in data packets.

a
Wherein the
The weighted fair queueing scheduling method has
been developed in the prior art for the transmission of
data packets. This method ensures only a lower limit on
the transmission rate of the data packets. In order to be
able to achieve an upper limit on the transmission rate
as well, a further scheduling method may be used ^{wherein the} ~~prior to~~
~~further scheduling method precedes the scheduling method~~
~~this, in the method according to the invention.~~
